Introduction

Prior to issuance of a Certificate of Occupancy (CO), a developer, builder, owner or other agent must submit As-Built Plans to Neighborhood Development Services (NDS) for distribution, review and approval. While it is expected that the project will be constructed in accordance with the approved plans, it is understood that unforeseen site conditions often require alterations to the approved plan. Changes that do occur during the construction phase should be brought to the attention of the neighborhood planner for that project. Minor alterations to the approved plan may, at the discretion of city staff, be captured in an As-Built Plan (opposed to a Site Plan Amendment for major alterations). As-Built Plans will be reviewed to ensure that the project was constructed per the approved plans and that all known changes are adequately documented. As-Built Plans are required for all new construction, excluding new 1 and 2 family residential dwellings which currently adhere to the existing requirements for As-Built Surveys.

As-Built Guidelines

The City of Charlottesville has established an “As-Built Plans” guideline to confirm that the project was built according to the approved plans and that all changes are properly documented. As-Built information shall be provided as follows:

- Note this guideline excludes the as-built requirements for 1 and 2 family residential dwellings.
- As-Built Plans shall be provided to the department of Neighborhood Development Services after completion of any multifamily dwelling, subdivision, commercial or industrial development, public roads, public or private utilities, or stormwater management facilities.
- As-Built Plans shall be based on a field run survey from a Virginia licensed surveyor. Information that cannot be easily obtained by a field run survey (such as location or depth of newly constructed waterlines or pressure pipes) should be obtained from the contractor’s marked up record drawings. These record drawings must be furnished to the surveyor prior to the field run survey.
- Plans should be a re-creation of the final site plan (where applicable) and stamped or labeled as “As-Built” and all changes from the approved plans should be marked with revision clouds or drawn in a different color.
- As-built plans shall be prepared, signed and sealed by a Virginia licensed surveyor or professional engineer.
- As-Built Plans should not be submitted for City review until all construction items are in place and complete. Bonding of any construction item that is required to be on the As-Built Plans will delay the approval of the plans.
- As-Built plans shall include all information included in the most recent version of the As-Built Plan Checklist.
- Review of the As-Built Plans will be inclusive of all building locations, property boundaries, site work, utilities, stormwater management systems and all pertinent information consistent with the approved site plan.
As-Built Procedure

- Upon completion of a project and prior to issuance of a certificate of occupancy, the owner/developer shall submit 4 copies of an As-Built Plan that has been prepared by a licensed surveyor or professional engineer.
- Staff will compare the As-Built Plan with the approved Site Plan. This review may occur during an on-site inspection and may require the developer/owner to make modifications to the site or changes to the As-Built Plans if there are substantial differences in the field that do not match the approved plans.
- If changes are required for the As-Built Plan, 4 additional copies must be provided to replace the previously submitted As-Built Plan.
- Once City staff is satisfied that the project has been constructed according to the approved plan, electronic copies of the As-Built Plan should be submitted in .pdf and .dwg format. For .dwg files, they should be saved to operate with the 2007 version of AutoCAD.
- After receipt and acceptance of the As-Built Plan, a certificate of occupancy permit may be issued.
